

Review of: "Analyzing the nexus between Spatial Data Infrastructure Development and e-Government"

Asmat Ali

Potential competing interests: No potential competing interests to declare.

Good effort, indeed. Good to see few components of an SDI. However, more components need to added. Similarly, components of e-Government are not visible. Please address the following questions to enhance the quality of the article:

- What is the link between SDI and E-Government?
- Are there any missing links between both initiatives which need to be established yet?
- Is there any duplication of efforts, and resources going on between both the initiatives? If so how to overcome that?
- How SDI would help to deliver how many and what kind of e-Government services?
