BLNK wt Allele

National Cancer Institute

Source

National Cancer Institute. *BLNK wt Allele*. NCI Thesaurus. Code C52374.

Human BLNK wild-type allele is located within 10q23.2-q23.33 and is approximately 80 kb in length. This allele, which encodes B-cell linker protein, is involved in B-cell receptor-dependent signal progression. The wild-type allele is essential for B-cell development.
