Potential competing interests: No potential competing interests to declare.

This study about "Infodynamics, Information Entropy and the Second Law of Thermodynamics" is recommended for publication, but the following observations are noted:

1. The abstract is not clear; it should clearly mention the use of Infodynamics and Information Entropy.
2. The introduction section must include more literature on infodynamics and entropy.
3. An application from biology or physics is not presented; that must be included for better understanding.
4. Grammatical errors must be removed from the text.

After making the corrections, I am recommending this article for publication.
