Chandler syndrome

INSERM

Source

INSERM. (1999). *Orphanet: an online rare disease and orphan drug data base*. [Chandler syndrome](#). ORPHA:98979

Chandler syndrome, the most frequent clinical variant of iridocorneal endothelial (ICE) syndrome (see this term), is characterized by very few iris abnormalities but more severe corneal edema and less severe secondary glaucoma than seen in the other two ICE syndrome variants: Cogan-Reese syndrome and essential iris atrophy (see these terms).
