Potential competing interests: No potential competing interests to declare.

In the context of inflammation and immunity, there are fragmented and observational studies relating to the pharmacological activity of *Mangifera indica* L. and its main active component, mangiferin. Authors nicely reviewed the impact of *Mangifera indica* on immunity. However, there is some missing information on the impact of this plant extract in the context of inflammation. I strongly suggest expanding the review article to also focus on this aspect. Some updated articles should be included (PMID: 35662629; PMID: 21899550; PMID: 32109839; PMID: 33353211). Moreover, additional illustrations of the mechanism/s of action and cellular targets should be included.
