Peripheral T-cell Lymphoma Prognostic Index Score

National Cancer Institute

Source

National Cancer Institute. *Peripheral T-cell Lymphoma Prognostic Index Score*. NCI Thesaurus. Code C161790.

A list of four factors to assess how an individual with peripheral T-cell lymphoma might respond to treatment and predict the risk of disease recurrence. The factors are: patient's age, LDH levels: serum levels often correlate with the amount of tumor in the body, performance status, and bone marrow involvement.
