**Potential competing interests:** No potential competing interests to declare.

It is an interesting paper that enhances women education and gender equality.

Permit me some useful comments.

- A Literature section should be provided by incorporating the theoretical and empirical studies, especially those mentioned in the Discussion section. Hence, we will obtain a clear picture of the contribution of the current study and where it is exactly differentiated as compared to the previous in terms of model, variables, and results.
- The Model as well as the dependent and independent variables should be explained in more detail and/or summarized in a separate Table.
- The objective of the study/research question should be clearly defined. This will help us to realize the significance of the main findings in the Discussion section. This will help policy implications to become more specific, as well.
- The final regression results as presented, should be noted is they have been performed under the Heteroscedasticity and Robustness check procedures.

I wish any further success.
