**Potential competing interests:** No potential competing interests to declare.

This is a worthwhile topic on industry cooperation with academia. The examples from the cement and auto industries give it credibility. The article needs to be improved in a few areas in order to make it more insightful to readers. 1.) While the processes (steps) described are logical, the reader is left with questions about details within these processes. For example, why video? What were the key training needs and how did this align (or not) with the company goals? 2.) What are continuous improvement factors to be considered by the training centers, especially with AI? This would be covered in lessons learned. 3.) Opportunities and threats are typically external factors covered under a PESTLE-C analysis. 4.) Minor point but spell out all acronyms. I hope that the authors can build upon what other reviewers have stated as well.
