**Potential competing interests:** No potential competing interests to declare.

The two natural fibers proposed in this paper are innovative, but the entire paper still leaves some room for improvement.

1. The introduction is too lengthy and should be related to the research of the paper.
2. The title of Chapter 3 should be changed to "Mechanical Test" because the following content is about testing rather than mechanical properties.
3. There are too many pictures of fibers in Chapter 2, which goes against the focus of the research content.
4. There are some simple grammar and word spelling errors in the article, such as writing "fibre" instead of "fiber".
5. Overall, this paper lacks research focus.
