

Review of: "Toxicological evaluation of aqueous extracts of *Clematis hirsuta* and *Rhamnus prinoides*"

Harpreet Kaur

Potential competing interests: No potential competing interests to declare.

1. Overall, this work is good.
2. Phytochemical analysis must be included in this study.
3. why choose 25 mg/kg, 75 mg/kg dosages?
4. Discussion on the effect of extracts on biochemical and haematological parameters could be given in order to make the study more valuable.
5. Why you chose only aqueous extract of both plants for study.
