

Review of: "Investigation of Mechanical Properties of Sisal Fiber and Sugar Palm Fiber Reinforced Hybrid Composites"

Dr. Sivaprakasam Palani

Potential competing interests: No potential competing interests to declare.

The authors have performed "Investigation of Mechanical Properties of Sisal Fiber and Sugar Palm Fiber Reinforced Hybrid Composites."

However, the manuscript needs to be major revision based on the following comments and suggestions.

1. In the abstract, it looks like descriptive statements; rewrite it.
2. In the introduction section, there is a lack of comprehensive literature support; authors should include more recent articles in the introduction sections and highlight the novelty of the research work.
3. Figures captions and resolution are very poor; they have to be enhanced with high resolutions.
4. Table 2. Check the values and units provided in the table; the percentage of water absorption is very high.
5. Check that all the figures and tables are properly numbered and cited in the text.
6. Include the images of test samples for tensile and flexural tests and impact with testing specifications.
7. There are no micrographs such as SEM figures which can illustrate the composites' properties.
8. In the results and discussion, scientific findings and justifications are not included.
9. The manuscript has many typo/grammatical errors. Authors need to revise the entire manuscript very carefully.
10. Lack of recent supporting references.
