**Potential competing interests:** No potential competing interests to declare.

The article provides a comprehensive overview of women entrepreneurship in the BTR area of Assam, including their profile, motivations, challenges, support mechanisms, and impact on socio-economic development. The article is well-structured and informative, but there are a few areas where it can be further improved:

1. Discussion of findings in relation to existing literature: The article briefly mentions the existing literature on women entrepreneurship in India, but it would be useful to expand on this by discussing how the findings from the study align with or differ from previous research. This would help provide a context for the study and contribute to the broader understanding of women entrepreneurship in the region.
2. Policy implications and recommendations: The article briefly mentions the need for policy interventions and support mechanisms tailored to the specific needs of women entrepreneurs in the BTR area. It would be valuable to further explore this aspect by discussing specific policy implications and recommendations based on the findings of the study. This could include suggestions for improving access to finance, promoting networking opportunities, providing skill development programs, and addressing gender biases and stereotypes.
3. Limitations of the study: While the article provides a detailed methodology and sample selection information, it does not mention any limitations of the study. It would be important to acknowledge potential limitations such as sample bias, response bias, or generalizability of the findings. This would increase the transparency and credibility of the study.
4. Recommendations for further research: Given the importance of women entrepreneurship for economic development and social empowerment, it would be beneficial to include a section on recommendations for further research. This could identify areas that require more in-depth investigation or suggest future studies to explore specific aspects of women entrepreneurship in the BTR area.

By incorporating these suggestions, the article can be further improved to provide a more comprehensive analysis of women entrepreneurship in the BTR area of Assam.
