Potential competing interests: No potential competing interests to declare.

This theme is an interesting issue because it is a current issue in Indonesia. If this article will be submitted into a journal, please follow the guideline of the journal, e.g abstract 350 – 400 words and provide it with 5 key words.

In your manuscript, you mention about the state. Please consider, who is the state? The governments in all levels are part of the state including the police officer. My suggestion is might be it is better to add inclusive public services which consists of state and non state actors.

After quick reading, it is better to gather more data regarding the referral mechanism of sexual violence against children in Yogyakarta province and how it operates at district and the villages level.

In addition, technically, the paragraph is needed to be written in a logical order e.g in the 1<sup>st</sup> paragraph, you mentioned about the data. In the 2<sup>nd</sup> paragraph you mentioned about the policy, then in the 3<sup>rd</sup> paragraph again, you mentioned about the data.

In addition, regarding your informants, you mentioned that some informants in your research are the community and family. In your research, you revealed that the children and family have responsibility to prevent sexual harassment. However, I do not find enough data or information on how you get those data and who you interviewed with.

Lastly, my general comment are first, this manuscript need to be rewritten based on the journal standart. Secondly, please consider the contradiction among each article part ; 1) research question and its results, 2) research question and your informants of the research.
