Review of: "Economics Research in the Twenty-First Century — 25 Years of Scientific Breakthroughs"

Natalia Ribberink¹

1. Hochschule für Angewandte Wissenschaften Hamburg, Hamburg, Germany

The paper contributes to a better understanding of the academic discourse in Economics over the first quarter of the twenty-first century by systematizing the main research trends and methods. The utilized approach to classify the published research by means of predefined key words helps to distill the most current and relevant research topics as well as to monitor their dynamics and regional distribution over time, i.e., to observe the emergence of novel research directions. The research results are supported by visualizations provided by the author. It is a great read for students in Economics and related areas, as well as for the overall academic community.
