Dear author, I am pleased to review your article. Such works are an eye-opener for health policy makers seeking to improve and advocate for child health. My comments are as follows:

1. Needs grammatical correction in certain words like "mattu."
2. Was done four years back, which may not reflect the actual vaccine program or the effects of COVID-19.
3. Small sample size.
4. Incorporating updated vaccine programs and recent references will be vital to further develop the manuscript.
