Dear authors,

Congratulations! Overall, the work content is good. But here are some suggestions:

1. The title of this review requires a major revision and may require rephrasing.
2. The botanical names need to be italicized.
3. Even though several important pieces of information on cucumbers, such as health benefits and nutritional aspects, were mentioned, the review lacks proper structure.
4. Abstract needs to be modified.
5. Scientific evidence in the processing of pickle production needs to be highlighted with valuable references.

Thank you
