Review of: "Building Foods Data Automation Platform Using Cloud Computing Type PaaS"

Aparna Raj [1]

1 Birla Institute of Technology and Science

1. The abstract and introduction require improvement.

2. Provide a state-of-the-art literature review.

3. Kindly add a block diagram for the system architecture.

4. The results section is deemed weak, and a thorough comparison with state-of-the-art methods is expected to strengthen it.

5. Enhance the correlation between technical intricacies and their real-world implementation within the realm of food information management.

6. Extend the conclusion to encompass the acknowledgment of study limitations and articulate potential avenues for future research.
