Potential competing interests: No potential competing interests to declare.

Thank you for asking me to review this interesting article. I think that subjects of Long Covid (LC), Chronic Fatigue Syndrome (CFS), Postural Orthostatic Tachycardia Syndrome (POTS), Mast Cell Activation Syndrome (MCAS), Small Intestine Bacterial Overgrowth (SIBO), and Ehlers-Danlos Syndrome (EDS) are quite important conditions that share some loose connections, with some poorly defined and overlapping symptoms.

This article discusses the relationship between the presence of chronic inflammation, fatigue, and the occurrence of methylenetetrahydrofolate reductase (MTHFR) abnormalities suggest a possible link between them, which is vitally important subject.

I think this article is well written, concise and informative.

My opinion is to accept this article without any modification.

Best regards
