In this study, the manuscript investigated Phytochemical Analysis and Antioxidant Activity of Extracts from *Berchemia zeyheri* — A Swazi Medicinal Plant. Overall, the manuscript is technically sound, and the research ideas appear justified. The subject of the research is interesting, and the description of the state of the art is good. I find the middle of the paper (methods and results) quite good, but the introduction, discussion, and conclusion are quite poor currently. Therefore, it would be better if the author rephrased the introduction and conclusion. Moreover, the conclusion part should summarize the detailed results.

The discussion section needs to be improved with a greater number of supportive references for each study parameter results.
