

# Review of: "Unlocking Natural Capital in the Megadiverse Colombian Pacific Basin: Navigating Challenges and Governance Gaps"

Verónica Rojo

Potential competing interests: No potential competing interests to declare.

Paragraph 2.

- Is very wet a common expression? I think highly wet or extremely humid could help to improve the idea.
- The Pacific Basin is considered a **biodiversity** hotspot.

This research is unequivocally innovative, addressing a fundamental issue in biodiversity conservation. It would be appropriate to consider the "Nature's Contributions to People" paradigm as a more comprehensive approach. This is due to the integral role of cultural aspects within these systems, which may not be fully captured by an analysis focused solely on ecosystem services, as it could present a somewhat myopic view. However, given that the study has already employed a different theoretical framework, incorporating this suggestion within the Discussion section could provide a more holistic criterion for interpreting the results.
