Potential competing interests: No potential competing interests to declare.

The article addresses an important and timely issue related to sustainability and environmental protection: mobile phone recycling. With the rapid growth in mobile phone usage, understanding recycling behavior is crucial. The study has a clear focus on examining demographic differences, particularly age and gender, in attitudes towards mobile phone recycling and stockpiling in the UAE.

The article should elaborate more on the research design, sampling method, and data analysis techniques to enhance the study's reliability and validity. The study's limitations is crucial for transparency and could guide future research in the area => the people involved in the research is limited, the authors should extend the number of participants. A more extensive literature review could help position the study within the existing body of knowledge and highlight its unique contributions.
