Potential competing interests: No potential competing interests to declare.

The author applied machine learning techniques in algorithmic trading. The topic is highly relevant to current financial technology trends and offers novel insights into machine learning applications in stock price prediction.

The research methodology is well-structured, with clear problem formulation. however, I will suggest that if possible, the author(s) should add additional validation of the models in real-world scenarios. Discuss the implications of this study in the context of AI in finance.
