

Review of: "The Growth Performance of Nile Tilapia (Oreochromis Niloticus) Fed Low-Cost Fish Feeds Formulated From Fish By-Products, Fishery By-Catch and Pig Blood-Meal"

Busisiwe Gunya¹

¹ University of Limpopo

Potential competing interests: No potential competing interests to declare.

1. The **introduction** lacks informing us more about growth performance and its impact; the writer spends a lot of time on the industry instead of unpacking growth performance and how it is impacted.
2. The **main objective** of the study is completely saying something else with no direct link to the topic; the author must align the topic with the objective.
3. The **hypothesis** looks at availing protein content to the fish, ignoring the feed impact on growth performance.
4. The **Materials and methods** lack referencing of other researchers who have conducted the research; not sure where the author got those procedures or which guide was followed.
5. Under **Discussion**, the author writes statements such as finding agree with other studies without referencing those studies and what was found in them. Each line must be written as it was said by those authors, to prove this agreement by other authors.

The paper is suitable to be published in Qeios after addressing the comments.
