The manuscript shows a lot of promise, but some major issues need to be addressed before it can be published:

- The keywords should be specific to your research topic .
- Include line numbers in the manuscript.
- The bacteria name should be italicized in the text.
- The sample size should be indicated in the sampling section.
- Throughout the manuscript, there are several language mistakes. Therefore, I recommend a professional round of language editing before the paper is published.
- The originality of this paper needs to be worked out before it can be considered for publication.
- The discussion and conclusions are difficult to follow and need to be rewritten to highlight the key contributions of this manuscript.
