Potential competing interests: No potential competing interests to declare.

The topic is important in the field of public health. However, even if it is a small review, it should follow a strict format, i.e., brief introduction, presentation of the author and the reviewed work, summary, critique, and conclusions. The authors do not mention methodological aspects, and citations or brief references in the body of the review are not observed. Some aspects, such as mentioning electronic cigarettes, were irrelevant; it is suggested to improve the document.
