

# Review of: "In-Vitro Antibacterial Activity of some Ganoderma Species: A Review"

Vadivelu Kumaresan

Potential competing interests: No potential competing interests to declare.

The authors have extensively reviewed the antibacterial activity of different species of *Ganoderma*. Also, details regarding diabetic foot ulcers have been presented in a broad manner. In the abstract, there is a mention of clinical investigations that don't seem to have dealt, especially with regard to diabetic foot ulcers. Care should be taken to avoid typographical errors and to properly frame the sentences. In some places, the species name is not correct, and in some places, the scientific names are not italicized. The sub-heading is Antimicrobial Activity of *Ganoderma* Species against Gram Negative/Gram Positive Bacteria, but fungi are mentioned in that.

The potential of *Ganoderma* is well reiterated, giving scope for future work.
