Dear Author,

I am writing to provide feedback on your manuscript titled "Augmented Reality (AR) Technology on Student Engagement: An Experimental Research Study." After a careful review, I recommend that your manuscript undergo major revisions before it can be considered for publication. Below are some key remarks to guide the revision process:

- The manuscript's abstract and introduction need revision for clarity, conciseness, and a stronger focus on the research problem.
- The introduction needs to be elaborated more.
- This paper does not include a background study or a literature review.
- More information is needed regarding the development and validation of the assessment tools used.
- It's important to discuss potential biases in self-report survey results and limitations related to this type of data.
- Instead of utilizing a table format, a graph format would be a better way to display the results table. There is a need to rework the results section as it is very lengthy.

I look forward to reviewing the revised manuscript.
