# Review of: "Selection of Bone-Targeting Peptides for Therapeutic Intervention: An In Vivo Evaluation and Comparison Study"

Dr. Sagar Salave<sup>1</sup>

1. Independent researcher

Specific comments:

1. Could authors comment on the solubility of the peptides?
2. Authors can also include EDAX analysis on pellets to support in vitro binding efficiency.
3. Analyzing crystals of HA under a fluorescence microscope could provide the distribution of bound peptides on the HA.
4. Can authors comment on the safety and stability of synthesized peptides?
