This paper is quite interesting since we use brakes in our daily lives. The abstract is well presented, but I could not find the research questions and objectives in this paper. Furthermore, the data applied in the feasibility study is also not explained how it was determined. The authors should be able to provide more empirical data. Analysis and discussion are also required to clarify how the results of the study and the mechanism of the proposed brake system. Finally, the conclusion should indicate the contributions, limitations, and directions for future research. Good luck.
