# Serine/Threonine-Protein Kinase A-Raf

National Cancer Institute

## Source

National Cancer Institute. *Serine/Threonine-Protein Kinase A-Raf*. NCI Thesaurus. Code C18535.

Serine/threonine-protein kinase A-Raf (606 aa, ~68 kDa) is encoded by the human ARAF gene. This protein plays a role in protein phosphorylation, signal transduction and the negative regulation of apoptosis.
