

Review of: "Challenges in Reducing Maternal Mortality Rate in Pakistan"

Maria Sheikh

Potential competing interests: No potential competing interests to declare.

The authors did a good job describing the major factors affecting maternal mortality rates in Pakistan. However, note comments below:

The essay needs to follow a standardized structure (Introduction, Materials & Methods, Results, Discussion, Conclusion) if it is being submitted as a scientific paper. It should be clear to the reader what the article is - a review, original research, editorial, etc. The abstract should be a succinct summary of aforementioned sections, not merely a repetition of the Introduction.

References should follow a standard format and should be checked for errors.

The authors should use fact statements, not opinion statements (unless they are submitting an opinion piece).

With significant revisions, this essay has the potential to be a good review on factors contributing to maternal mortality in Pakistan.
