Potential competing interests: No potential competing interests to declare.

I reject this paper for publication.

- An English language expert was required to check and revise the entire manuscript.
- This work is very weak.
- The authors must add the accession numbers of the studied genes.
- Authors should mention the names of proteins used in western blotting, and also gene expression methods must be mentioned in brief.
- Authors must mention references for all methods used.
- Authors must write the statistical analysis used in the methods.
- References must be checked, revised, and updated.
