Dear editor of "Qeios"

Thank you for inviting me to judge this article entitled: "Serological detection strategy and prevalence of HIV and Viral Hepatitis B and C in blood donors in Yaoundé Cameroon". Congratulate to the authors for performing the valuable study.

The current manuscript is on seroprevalence of blood born viral infection such as HIV, HCV, and HBV in Yaoundé Cameroon, and I'm so sad for high prevalence of HBV in the population of this region of SSA.

I have some comments that I hope can improve the manuscript.

1. The number of authors before and after the abstract is different
2. You don't need the "+" sign in the abstract, on the second line of the result part.
3. Please mention the sensitivity and specificity of the kit to use.

Best regard: Jamalidoust
