# Isolated partial vaginal agenesis

INSERM

## Source

INSERM. (1999). *Orphanet: an online rare disease and orphan drug data base*. *Isolated partial vaginal agenesis*. ORPHA:96269

Isolated partial vaginal agenesis is a rare, non-syndromic urogenital tract malformation characterized by the absence of a vagina or the presence of a vaginal dimple shorter than 5 cm. It is often associated with uterine agenesis, hematocolpos or primary amenorrhea and dyspareunia. Ovaries and fallopian tubes are normal.
