# D-2-hydroxyglutaric aciduria

INSERM

## Source

*INSERM. (1999). Orphanet: an online rare disease and orphan drug data base. D-2-hydroxyglutaric aciduria. ORPHA:79315*

D-2-hydroxyglutaric aciduria (D-2-HGA) is a rare clinically variable neurological form of 2-hydroxyglutaric aciduria (see this term) characterized biochemically by elevated D-2-hydroxyglutaric acid (D-2-HG) in the urine, plasma and cerebrospinal fluid.
