

Review of: "Revolutionizing Precision Agriculture with Drone-Based Imaging and Fuzzy Intelligent Algorithms"

Amadou Tidjani Sanda Mahama

Potential competing interests: No potential competing interests to declare.

1. Introduction

- Introduction does not focus on the main objective of this paper but on drone technology.
- There is no announcement of the structure of the remaining part of the paper.

1. Review of Literature

- Is focused on the use of UAVs in agriculture and other areas like defense, ...
- We do not have a real literature review on the main problem. We don't know what works were done before related to plant disease segmentation using remote sensing images.

1. Methodology

- Fuzzy intelligent algorithm is not meaningfully presented.
- The paper must be restructured and correctly separate literature review from results .
- Results must be properly presented.
- Discussion must yield and include comparison to existing works.
