

# Review of: "Tomatoes Unveiled: A Comprehensive Exploration from Cultivation to Culinary and Nutritional Significance"

Emel Hasan Yusuf

Potential competing interests: No potential competing interests to declare.

You can see my suggestions below:

1. *Solanum copernicium* is a Latin name that should be italicised.
2. Why are the parts of subtitles so short, only with 1 reference?
3. Lycopene is also an antioxidant and anti-inflammatory agent.
4. Why do you give processes of seed oil production but not, for example, tomato juice or sauce production processes?
5. I recommend major revisions for the paper to expand the information.
