Review of: "FLAML-Boosted XGBoost Model for Autism Diagnosis: A Comprehensive Performance Evaluation"

Enas Raheem[1]

1 University of Technology - Iraq

1-The abstract doesn't clarify the what is being used to handle the stated problem and no results were declared or explained not even briefly.

2-Introduction section lacks to literature review of related work to highlighted where the research gap or problem came from.

2- Methodology is so poor such that no experimental setup can be reused or refined by other researchers plus that there is no flow diagram for the work.

3- results should be explained further and discussed more to highlight strengths and weaknesses of the methodology used to have them.

4- The overall idea is novel , applicable and important but the whole work needs to re-structured taking into consideration above notes to produce a fine useful paper.
