Isolated agammaglobulinemia

INSERM

Source

INSERM. (1999). Orphanet: an online rare disease and orphan drug data base. Isolated agammaglobulinemia. ORPHA:229717

Isolated agammaglobulinemia (IA) is the non-syndromic form of agammaglobulinemia, a primary immunodeficiency disease, and is characterized by deficient gamma globulins and associated predisposition to frequent and recurrent infections from infancy.
