

Review of: "Developing A Novel Solvent System to Isolate Plant Pigments of Different Polarities Using Thin Layer Chromatography"

Yanan S Pang

Potential competing interests: No potential competing interests to declare.

Beautiful use of simple chemistry to meet the objective. But the article suffers from a few drawbacks that should be addressed first.

1. Directly the final composition was provided. The other solvent mixtures should be discussed (presumably the negative results).
2. Discussion section is repetitive and superfluous.
3. Conclusion should be concise and to the point.
4. More details are required for the methods section.
