# Esophageal Neuroendocrine Tumor G1

National Cancer Institute

## Source

National Cancer Institute. *Esophageal Neuroendocrine Tumor G1*. NCI Thesaurus. Code C5820.

A rare, well differentiated, low grade tumor with neuroendocrine differentiation that arises from the esophagus. The mitotic count is less than 2 per 10 HPF and/or the Ki67 index is equal to or less than 2 percent. The majority of cases have a polypoid appearance, are small lesions, and found incidentally.
