Potential competing interests: No potential competing interests to declare.

The authors reported in this paper, "Determining kinetics parameters of bovine serum albumin-protected gold nanozymes toward different substrates". I recommend this work for publication after addressing the following points.

1. The reviewer is particularly interested in TEM analysis of bovine serum albumin-protected gold nanozymes. While some more information of said enzymes is recommended; such as UV-vis, fluorescence, DLS, FTIR. Authors are advised to incorporate those data with proper explanation.
2. Authors are advised to check grammatical errors throughout the manuscript.
3. Why authors are particularly interested to measure the kinetics parameters of BSA gold nanoenzymes? It is advised to check the kinetics measurement with HSA.
4. Graphical abstract should be enclosed in the revised manuscript.
5. Writing should be improved.
