Potential competing interests: No potential competing interests to declare.

The author tried to write an article about a very important issue during the exploitation of a deposit. I read the article with curiosity, thinking that I would learn something that has not yet been described or known anywhere. I think that the author will refer to my In this article, a compensatory summary of knowledge already known and used in the exploitation of deposits has been collected. A very interesting title, an engaging article to read from which I would like to learn something new. However, the author attempted to collect literature knowledge. The introduction should include, in addition to what happened, information about the research carried out, what was tested using what methods and what results were obtained. The conclusions should be similar: they should highlight the research providing an answer to the question of how to increase the tightness of deposits in various variants of exploitation. In addition to your research, the research methodology should be described, what it used to be and what it is today and what has been improved in it to show that you can contribute something to science. I believe that the article should be completely revised, with particular attention paid to making a scientific contribution based on my own research and experience. In conclusion, it is difficult to understand what the author's contribution to the work is.
