Review of: "Healthcare Systems Moving Toward Data Governance-Centered Model: India's G20 Presidency in the Wake of COVID"

Hany Akeel Al-hussaniy¹

1. University of Baghdad, Iraq

This commentary provides a timely and policy-relevant overview of the growing importance of data governance in healthcare systems, particularly in the context of India's G20 presidency and the post-COVID transformation of digital health infrastructure. The article effectively highlights the expanding role of digital health technologies, national initiatives such as the National Digital Health Mission, and the need for secure, transparent, and inclusive data-sharing frameworks to strengthen healthcare resilience and accessibility. The discussion successfully integrates global health governance perspectives and emphasizes ethical concerns such as privacy protection, algorithmic bias, and public engagement. However, the manuscript remains largely descriptive and would benefit from deeper analytical evaluation, inclusion of empirical case studies, and clearer comparative insights with data governance models from other countries to enhance its academic depth. Additionally, outlining measurable policy outcomes and implementation challenges would strengthen its practical applicability. Overall, the commentary contributes valuable policy discourse and underscores the strategic role of digital data governance in shaping future healthcare systems, although further analytical rigor would improve its scholarly impact.
