Potential competing interests: No potential competing interests to declare.

The research is indeed deserving of attention due to its important topic about building design parameters for the safety of individuals with Autism Spectrum Disorder. However, there are some points that could be improved:

Improve Research Structure: The text begins with a lengthy and somewhat complex introduction. It is advisable to break it into shorter sections to enhance clarity and readability.

Text Conciseness: Some sentences are overly long and could be shortened to increase clarity.

In summary, this research covers an important topic, and with structural and content adjustments, you will have an interesting research with a valuable contribution to the field of inclusive and accessible building design for individuals with Autism Spectrum Disorder.
