2,6-Diaminopurine

National Cancer Institute

Source

National Cancer Institute. *2,6-Diaminopurine*. NCI Thesaurus. Code C29796.

One of a number of organic compounds that share a similar purine structure and possess antiviral and antitumor properties. 2,6-Diaminopurine nucleosides are versatile synthetic precursors for specific N-6 modifications of antiviral and antitumor agents. (NCI04)
