Somatostatin Receptor Type 4

National Cancer Institute

Source

National Cancer Institute. *Somatostatin Receptor Type 4*. NCI Thesaurus. Code C17987.

Somatostatin receptor type 4 (388 aa, ~42 kDa) is encoded by the human SST R4 gene. This protein plays a role in the inhibition of proliferation, stimulation of arachidonate release and activation of the mitogen-activated protein (MAP) kinase cascade.
