AIDS-Related Kaposi Sarcoma Overall Risk Group

National Cancer Institute

Source

National Cancer Institute. *AIDS-Related Kaposi Sarcoma Overall Risk Group*. NCI Thesaurus. Code C134984.

The overall risk group for AIDS-related Kaposi sarcoma based on the tumor, immune system, and systemic illness status. Since highly active antiretroviral therapy became available to treat HIV, the immune system status has become less important and is often not counted in determining the risk group. (American Cancer Society)
