# Nephropathy-deafness-hyperparathyroidism syndrome

INSERM

## Source

*INSERM. (1999). Orphanet: an online rare disease and orphan drug data base.*

*Nephropathy-deafness-hyperparathyroidism syndrome. ORPHA:2668*

Nephropathy-deafness-hyperparathyroidism syndrome is characterised by renal failure without haematuria, parathyroid hyperplasia and sensorineural deafness. It has been described in five children born to consanguineous parents. The mode of inheritance appears to be autosomal recessive.
