FrSh61 (MEA) VHL33 Peptide

National Cancer Institute

Source

National Cancer Institute. *FrSh61 (MEA) VHL33 Peptide*. NCI Thesaurus. Code C29065.

A peptide derived from the tumor suppressor protein Von Hippel-Lindau (VHL). This peptide, sequence: MEAGRPRPCCAR, was constructed based on a frameshift mutation of one of the VHL gene products; the more abundant protein VHLp18(MEA) (where MEA stands for three amino acids, Met-Glu-Ala). Vaccination with FrSh61(MEA)VHL33 peptide may stimulate a cytotoxic T-lymphocyte (CTL) response against tumor cells expressing this VHL mutant protein.
